**A REPORT ON TREE PLANTATION**

On campus, the NSS Department of SIPS organized a tree-planting drive. Trees are the primary source of oxygen production and assist to lower CO<sub>2</sub> levels. Planting trees has emerged as one of the most crucial components of today's society since, as we all know, the entire world is currently experiencing a crisis with global warming. The principal, Dr. Laxmikant B. Borse, was invited as a guest, and the event started with his introduction. The programme officer, Hemant U. Chikhale, has simply delivered a welcome address. In order for the Society to evolve and improve, the principal recommendation given at the time to volunteers was to think differently for the society at large for its betterment. Principal and other staff members walked towards the site of the tree planting after the motivating words. Dr. Laxmikant B. Borse planted the very first tree, and more than 15 others, including staff and volunteers, also planted trees that day. After the tree planting event was over, everyone was content and proud of themselves because doing well for the environment is a wonderful feeling.
